

# PickStar

The easy to implement, productivity enhancing pick to light solution

**PickStar is Pcddata's next generation Pick to Light solution that can be installed in just about any environment with minimal operational impact. PickStar's software has been designed with ease of use and operational simplicity in mind.**

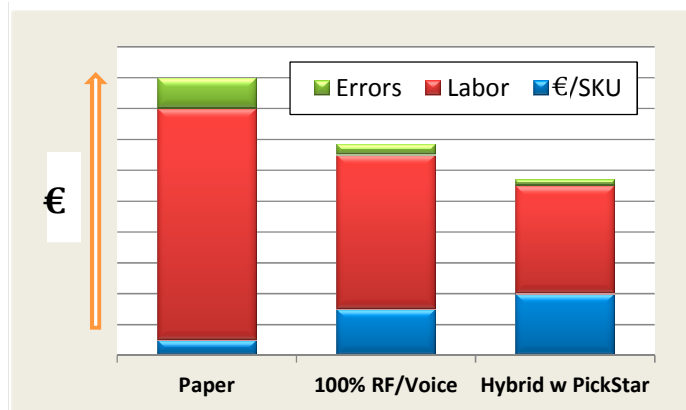

PickStar requires nothing more than the most basic of user involvement and our intuitive GUI means a quick training cycle – employees are at full capability in minutes, not months and you won't have to rely on IT engineers for support!

Simplicity in design translates directly into speed of deployment and maintenance, meaning that you can start bringing the benefits online fast. The hardware components are modular and user replaceable, minimizing maintenance and support costs.

### Immediate increase in productivity

In the right environment, Pick to Light systems in general will outperform typical voice, RF scanning or paper based picking and order assembly processes. With its rapid deployment, low cost and ease of use, PickStar becomes an even more attractive proposition in productivity enhancement.

NOTE: €/SKU can be even lower than 100% voice or RF, dependent on SKU pick density!

### Common PickStar applications:

- Fast moving item picks at any warehouse
- Assembly line processes
- Food logistics
- E-commerce
- Consumer goods
- Spare parts

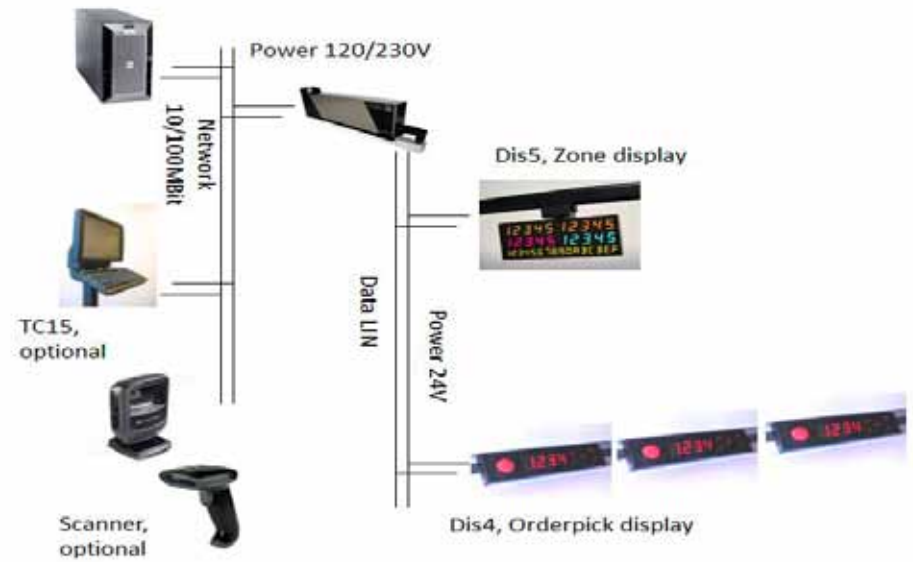

## Features

- High visibility, robust order pick displays
- Flexible mounting method meaning the system can grow along with your operation
- Simple and intuitive Software
- Highly accurate order assembly
- Orders can be handled either by barcode scanning or manual selection
- Picking data can be interfaced-back to ERP/WMS system providing real time visibility
- Hassle free user maintenance

## Easy hardware installation

READY TO GO

## Low IT requirements

PickStar does not require high powered servers or complex network infrastructure. It can be run from a standard Windows computer (subject to usage demands) meaning that in many cases, your existing IT landscape can be utilised.

PickStar has no complex menus, no difficult voice commands, no triggers to learn, no complex picking lists to decipher. This means your employees start gaining efficiencies fast and temporary staff take minutes to train, increasing your operational flexibility.
