

# Distrib<sup>XE</sup>

by  **pcdata**  
Logistics Automation

Pick-to-Light made easy.

**Distrib XE** is a self-supporting Put-to-Light solution for up to 50 locations, developed specifically with bakery operations in mind. **Distrib XE** replaces the need for order pick sheets and automatically doubles as confirmation of product amounts received for dispatch. No more guessing.

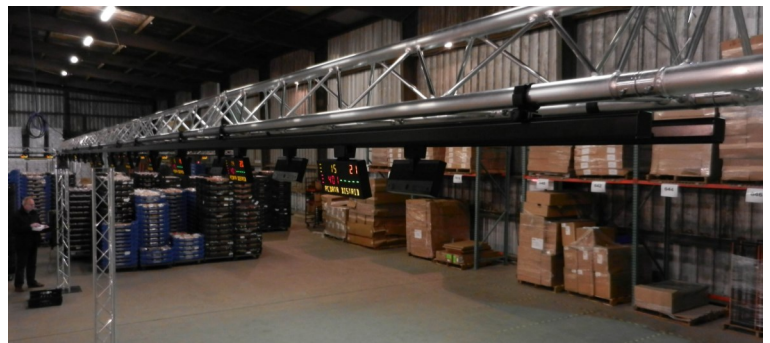

Uniquely designed, Distrib XE can be complete set-up without an electrical contractor. Thanks to it's clever, modular support system and patched cables Distrib XE can be operational in a matter of hours. The video tutorial and built in configuration wizard allows set-up with minimal IT skills. The interface to Distrib XE is kept intentionally simple, it only requires a simple flat file of the daily orders.

## Increase productivity and traceability

**Distrib XE** records all dispatch transactions, making it easy to accurately establish how and when the orders have been fulfilled and to reconcile against production numbers. **Distrib XE** uses Put-to-Light, which has proven to be the most productive manual order fulfilment technology for the fresh baking industry.

## Benefits of Distrib XE

- Eliminates 'Unaccounted For'
- Real time track and trace of order fulfillment

## Typical Distrib XE System Configuration

## Easy hardware installation

## Low IT requirements

Distrib XE was designed to minimize IT requirements to make implementation as easy as possible. The software comes with an installation wizard which guides the operator through the configuration process step by step. There are no drivers or databases to be installed as set-up.

In the unlikely event of questions, a 24x7 helpline is available for support
